Introducing Genetec

Genetec is a Montreal-based software company specializing in security solutions for video surveillance, access control, and automatic license plate recognition (ALPR).

When we first started out in 1997, we were a modest group of engineers with big dreams to build a security system that could empower our customers to master their environments.

This vision led to our very first IP-based surveillance system, offering more scalability, flexibility, and ease of use than anything else on the market.

Since then, we have grown to become an industry leader in IP-based security solutions, working closely with partners and customers in over 80 countries across six continents to develop forward-thinking products that are both adaptable and enduring.

Our solutions go beyond security. We develop resilient, connected systems designed to contribute new levels of operational intelligence to governments, enterprises, transport, and the communities in which we live.

Today we continue to follow our mission to help our customers protect their environments through collaboration and relentless innovation.

Intelligence

Understand the everyday

Mastering your environment requires a deeper understanding of your organization, customers, and staff.

Your security infrastructure gathers valuable information around the clock – from video surveillance footage to door reads, IoT data, and other sources and sensors. Making sense of such complex findings can be challenging, especially when dealing with larger security systems. So how can you turn this information into meaningful insight?

Our intelligence tools analyze multiple sources of data through an advanced analytics platform, giving you deeper situational awareness. Using correlation engines, we connect the dots across your systems to reveal the big picture – allowing you to see things clearly, make better decisions, and resolve issues more efficiently.

Operations

Improve the everyday

It takes the right tools to improve the efficiency of your operations.

Securing a complex environment requires a sophisticated security infrastructure – this can be difficult to manage. With protocols evolving faster than staff can be retrained, it's easy for mistakes to happen.

Our operations tools make it easier. They help you take control of your complex security system by giving your security personnel new levels of visualization and incident management capability.

Once an incident has been addressed, collecting, storing and sharing evidence files is simple, helping investigations move more smoothly.

The result is that your personnel can respond faster, more efficiently, and with confidence to do everything from routine tasks to the unexpected.

Security

Protect the everyday

Protect your people, systems, organizations, and buildings.

Physical security and video technology are the backbone of any security system. Since 1997, we've been building innovative hardware and appliances that help your system achieve its full potential, and keep it protected from external threats.

What sets us apart is our approach to security, which focuses on true system unification. Our platform incorporates our three core systems of video surveillance, access control, and automatic license plate recognition – as well as our optional modules and partner add-ons. This unified platform is designed to have everything and everyone working together under a single comprehensive interface.

Our open architecture means you're not locked into proprietary hardware. Choose from a wide array of partners and brands as your system grows.

And with built-in privacy and cybersecurity measures on all our products, you can rest assured that Genetec systems remain vigilant against cyberattacks.

Intelligence

Understand the everyday

Gain insights into your business and security environments through intelligence from your security system.

Security Center

**Work smarter with a unified view
of your security**

Genetec Security Center is an open security platform that offers enhanced situational awareness, unified command and control, and ease of system management.

This modular platform lets you handpick the devices, solutions, and features that match your unique requirements. It also empowers your team to respond to any situation by giving them access to the information they need, all in one central place.

The Security Center platform is different from other security solutions.

Unlike integrated systems where disjointed security applications simply share data, our platform goes deeper. It delivers a cohesive operating picture through modules that were built as one system. We call this unification.

For you and your users, this means there's no more jumping between interfaces, tackling system compatibility issues, or dealing with complicated maintenance.

Instead, you get a unified experience that saves you both time and money. Your team can handle monitoring, reporting, alarm management, and maintenance, while ensuring data protection and privacy – all from one interface.

Within Security Center, you'll find three core systems: Omnicast, Synergis, and AutoVu, our solutions for video management, access control, and automatic license plate recognition (ALPR) respectively.

This open and modular platform lets you evolve your system as your needs change. Over time, you're free to tap into additional modules, add-ons, and integrations with third-party security devices and systems.

Whether working from a remote workstation or a central control room, every operator sees the big picture. Security Center correlates information from all sensors and alerts your team to the most pressing situations to keep everyone on the same page.

Working smarter with video

Security Center Omnicast™ is a video management solution that gives you a clear picture of events and empowers you to quickly react to threats. The system scales with your needs and lets you take advantage of the latest hardware and analytics technologies. With a smarter approach to video, your operations and security improve over time, helping you to take better, more informed decisions.

Automate security and gather insights

Use video hardware of your choice

Protect the privacy of your system and data

Grow your system at your own pace

Gain uninterrupted access to video 24/7

Prepare for any scenario with advanced access control

Security Center Synergis™ is an access control system that makes use of existing network and security equipment investments to heighten an organization's security and increases your readiness to respond to incidents and threats. With advanced security measures and support for an ever-growing number of 3rd party access control devices, Synergis allows an organization to confidently protect its people and assets.

Synchronize cardholders across multiple systems

Manage/track visitor movement

Manage threat levels

Synchronize with Microsoft Active Directory

Protect against hardware failure

Manage parking and detect vehicles of interest more efficiently

Security Center AutoVu™ is the automatic license plate recognition (ALPR) system within the Security Center platform that automates the reading and identification of vehicle plates. AutoVu makes it easier for you to locate vehicles of interest and enforce parking restrictions and permit compliance. Designed for both fixed and mobile installations, AutoVu improves public safety and increases operational efficiency.

Unify ALPR, video, and access control

Understand vehicle flow with advanced graphical reporting

Choose from versatile deployment options

Learn more with vehicle analytics & metadata

More than ALPR units – Deploy your SharpV as access control readers and video cameras at the same time

Cloud-based video monitoring

Genetec Stratocast™ is a cloud-based video monitoring solution that allows you to stream live and recorded video from your laptop, tablet, or smartphone. The solution is easy to install, requires minimal upkeep, and helps secure your data. Stratocast helps you be confident by knowing that no matter where you are, your business is safe, and operations are running smoothly.

Find the exact evidence you need

Monitor your business on the go

Stay secure – always

Enjoy easy installation & maintenance

Centralize monitoring by federating Stratocast to Security Center

Unify operations to prepare and manage every type of situation

Genetec Citigraf™ is a public safety decision support system that allows cities, law enforcement, and emergency responders to work together to plan for, identify, and respond to events and incidents. The system consolidates, analyzes and correlates data from a multitude of sensors to provide a common operating picture to all dispatchers and responders so they can take insight-driven decisions during a mission. It allows neighboring cities to exchange critical information to improve disaster response and recovery and protect their citizens.

Gather data from multiple sources

Correlate historical and live data to derive intelligence

Share the same information with field personnel

Detect and understand incident trends and risks

Collaborate through a common operating picture

Understand shopper behavior with advanced consumer intelligence

Genetec Retail Sense™ is an advanced consumer intelligence solution that lets you use existing security infrastructure to gain an intimate understanding of your shoppers. Unlocking intelligence lets you make informed decisions to enhance customer experience and engagement, and to increase in-store profitability. Use data-driven insights to drive traffic to stores and reduce shopper abandonment by tailoring displays, product placement, and promotions to shopper preferences.

Transform security data into shopper insights

Analyze traffic drivers and related client visits

Reduce abandonment and increase conversions

Get insights from occupancy and customer flow analytics

Discover shopping trends to improve product planning

Close cases faster with collaborative investigation management

Genetec Clearance™ is a digital evidence management system (DEMS) that helps speed up investigations by allowing the secure collection, management, and sharing of evidence from different sources. Data from surveillance systems, body cameras, and civilians is efficiently gathered and stored. This gives you a quick and cost-effective way to collaborate between security departments, outside agencies, law enforcement, media, and the public.

[Centralize your digital evidence](#)

[Track user activity with audit trails](#)

[Grant different permission levels](#)

[Conduct map-based searches](#)

[Collaborate and share with everyone](#)

Empower your organization with collaborative decision management

Genetec Mission Control™ is a decision management system that simplifies incident response through situational intelligence and a common operational picture. The interface allows operators to detect and take control of situations based on real-time data gathered from sensors, security devices, and related applications. The system prioritizes larger incidents and initiates collaboration between response teams. It removes emotion from the equation by guiding operators every step of the way.

Qualify events and group them as incidents

Automate and dispatch minor incidents

Coordinate response to critical events

Guide operators with dynamic standard operating procedures

Measure and monitor team performance

Take control of your traffic, evolve with your changing environment

Genetec Traffic Sense™ is a cloud-based visualization and dashboarding tool that allows you to leverage data from your traffic sensors, video analytics, counting sensors, beacons, and third-party data sources. Delve deeper into your data to build reports for travel-times, average speeds, volumes and occupancy. Advanced comparative reporting functions identify patterns and outliers to provide you actionable insights on the behavior of the traffic you monitor.

Bring data together to better understand events

Consolidate traffic sensors data

Extract actionable insights from your data

Visualize occupancy and traffic flow in detail

Plan future investments by analyzing trends

Safeguard the flow of people so they can go about their day unimpeded

Genetec ClearID™ is an Identity and Access Management (IAM) platform that allows an organization to standardize, automate, and enforce security policies across all sites, while centrally managing the access rights of employees and visitors. The system allows you to securely improve the flow of people moving about your organization, no matter the size – ensuring that only individuals with the right approvals have access to secure areas for the exact time frame required.

Unified with Security Center Synergis

Self-service portals with customized branding

End-to-end data security and privacy

Out-of-the-box, easy to deploy

Multi-site management

Streamvault™

Streamvault is our line of appliances, storage, and workstations. Built to simplify design, deployment, and maintenance, Streamvault paves the way to unified security and unleashes efficiency along the way.

Eliminate routine set-up tasks with operating system, databases, and Security Center pre-loaded

Reduce project risk and simplify design with guaranteed performance and retention period

Resolve issues faster with one contact for hardware and software questions

Bolster system resilience with out-of-the-box hardening and cybersecurity best practices enforcement

Speed up system installation with wizards-based enrollment and configuration tools

Keep your system up-to-date with verified and built-in application, firmware, and operating system updates

Benefit from enhanced hardware warranties and next-day on-site service

Lower costs of deploying video analytics by running more streams per appliance

All-in-one appliances

Ideal for small sites or installations that don't require constant monitoring.

- Discrete designs that blend in with your environment
- Available with native support for IP door control hardware and analog cameras

Analytics appliances

A cost-effective path to smarter security with optimized configurations that can analyze a large number of video streams

- Pre-loaded with KiwiVision Privacy Protector, Intrusion Detector, and unified security analytics
- Available in compact and rackmount models

Rackmount appliances

Streamvault rackmount appliances let you deploy a unified system that realizes your vision with fewer units.

- Comprehensive catalog with models adapted to mid-sized and enterprise installations
- Available with SATA, SAS, or SAN storage

Workstations

Deliver fluid playback and a responsive experience that matches your system's capabilities.

- Optimized for Security Center GPU accelerated video decoding
- Available for security stations and video walls

Synergis hardware

Move away from proprietary access control

Traditional access control systems limit your long-term flexibility with proprietary hardware. The Synergis IP access control system helps you break away from this closed model, allowing you to choose the devices that best meet your security needs. As the list of supported access control technology grows over time, you can easily upgrade your hardware and locks to keep your organization compliant and secure.

Integrate a growing and versatile selection of access control hardware from leading manufacturers

Choose from a wide range of supported door controllers, interface modules, electronic locks, and PoE-enabled edge devices

Simplify your migration to new technologies by keeping some hardware, wiring, and infrastructure

Enhance the long-term viability and flexibility of your access control investment

Enjoy greater peace of mind knowing that you are not locked into proprietary hardware

Get an IP-ready security system that provides real-time connectivity to your doors

Synergis Cloud Link

This cloud-ready and PoE-enabled appliance supports non-proprietary access control modules from leading manufacturers.

- Up to 32 downstream RS-485 devices
- Up to 64 readers (with V100)¹
- Up to 256 locks¹
- Up to 250,000 cardholders and 150,000 offline events

Intelligent controllers & modules

Using Synergis, you can select non-proprietary modules and panels from leading access control vendors to match your unique environment and security goals.

- HID EDGE and VertX products
- Mercury Security LP and EP intelligent controllers
- Axis A1601 network door controller
- All managed by Synergis Cloud Link or the Streamvault Series 300 appliance

Supported enclosures

Our pre-assembled enclosures includes a choice of supported controllers and modules and the appropriate power supplies.

Components can include:

- 1 Synergis Cloud Link
- Up to 6 interface modules
- 6A power supply and fuse assembly

Electronic locks

Integrate the following electronic lock models using the Synergis Cloud Link appliance, and easily manage them within Security Center Synergis.

- ASSA ABLOY – Aperio, Corbin Russwin, and SARGENT locks
- Allegion – Schlage hardwired and wireless locks
- SALTO – SALLIS line of wireless locks and locking devices
- SimonsVoss – SmartIntego Digital Locking Cylinder, Smart Handle, and Padlock

1. Number of locks and/or readers supported will depend on downstream device manufacturer and models deployed.

ALPR devices

From vehicle-mounted systems to fixed perimeter installations, AutoVu lets you choose the ALPR hardware your team needs to get the job done – whether that’s securing a business, tracking wanted vehicles or enforcing parking bylaws.

Fixed applications

AutoVu SharpV

The AutoVu SharpV combines high-resolution ALPR and context cameras with onboard processing and illumination in one ruggedized, environmentally sealed device. The SharpV is perfect for high-speed, high-reliability applications.

- Built to read license plates and stream video simultaneously
- PoE+ enabled device for simplified installation
- Plate capture up to speeds of 140 MPH (225 km/h)

AutoVu Flexreader™

AutoVu Flexreader allows you to use IP video cameras* to identify and monitor vehicles entering or leaving your premises or lots at low speeds. Flexreader is a cost-effective way to extend your ALPR capabilities.

- Plate capture up to speeds of 30 MPH (50 km/h)
- Cost-effective ALPR solution for low-speed monitoring
- Scalable architecture

* Supported cameras only, hardware not included.

Mobile applications

AutoVu SharpZ3

The AutoVu SharpZ3 rethinks what mobile ALPR can achieve. Built to leverage machine learning technology to its full potential, it combines high accuracy with vehicle and situation analytics to unlock new insights.

- 3rd optical sensor to maximize capture rate
- Built-in vehicle classification, plate origin and color recognition analytics
- Modular architecture enables addition of new capabilities over time

Genetec Advantage™

Get more from your security investment

Genetec Advantage is a comprehensive software maintenance package that enhances the value of your security system. Gain added peace of mind knowing that you'll always have access to the latest software upgrades, premium support services, and other performance-boosting perks.

When a new software release becomes available, you'll be the first to know about it. Access the latest system capabilities, cybersecurity updates, and third-party integrations.

Should your system integrator ever need assistance, our experts are a phone call away. Choose your preferred level of priority phone support – 24/7 or only during business hours, or have a support engineer dedicated to your system.

Through our System Availability Monitor, your integrator can remotely monitor the health of your system to keep everything optimized and running at peak efficiency.

Whether you have a multi-site enterprise system or a small business setup, Genetec Advantage lets you focus your attention on your security operations rather than on the systems supporting it.

Our industry solutions

Venues and open spaces

Higher education

Bring your campus together
with unified security

Providing a safe and vibrant campus means finding the right balance between security and accessibility.

Our unified security platform lets your team handle it all. Easily monitor video, manage access control, and enforce parking across multiple locations all from a single solution.

Maintain an all-encompassing view of teaching facilities, research labs, dormitories, libraries, sports complexes, parking lots, and more through an interactive map interface.

Be prepared to deal with any emergency by establishing clear connections and communication pathways with law enforcement and other local authorities.

The system will guide your operators through the right steps to resolve alarms, situations, and emergencies with easy-to-follow response procedures to reach a resolution to any situation.

[Secure your entire campus](#)

[Provide students one card for everything](#)

[Enforce parking regulations](#)

[Integrate existing infrastructure](#)

[Scale your system over time](#)

Retail

Create a safe and profitable shopping experience

Protecting people, property, and shrinkage numbers is a fact of doing business for retailers.

Our unified security platform empowers your team to work more efficiently. Monitor video, control access to restricted areas, and detect intrusions from a single map interface.

Link your POS transactions to video to detect staff errors and suspicious transactions. Connect electronic article surveillance (EAS), inventory tracking, and analytics sensors to minimize loss across stores and warehouses. The system's built-in cybersecurity and privacy defenses ensures data – including client information – remains secure.

If a delivery door is left open or a repeat offender enters your store, our platform alerts your team. After responding, they can quickly compile digital evidence and share it with local authorities.

As your business evolves, use your security data to learn more about how customers shop and pinpoint improvements to increase conversions.

Manage all your systems in one platform

Keep existing devices and upgrade over time

Respond on the go with your phone or tablet

Save time and money during investigations

Gain insights on customer behaviour

Financial services

Bank on a unified approach to security

Safeguarding people, data, and assets is critical to the success of any financial institution. Our unified security platform gives your team the information they need to resolve incidents quickly and safely.

Manage video, control access to sensitive areas, and detect intrusion across your branches, headquarters, and data centers – all from one intuitive solution. Built-in privacy and cyber defenses help you protect identities, secure data, and avoid costly breaches.

Respond to any event with greater agility using your phone, workstation, or tablet. Speed up investigations by integrating ATM transactions with video surveillance and share digital evidence with authorities within the same platform.

Over time, expand your use of this flexible security platform to leverage analytics, track vehicles, and enhance customer service.

[Monitor all security systems from one location](#)

[Work smarter with a unified security view](#)

[Benefit from integrated privacy and data protection](#)

[Manage, collect, and store digital evidence](#)

[Choose your own cameras and devices](#)

Justice and public safety

Secure your city through a shared lens

Cities are dynamic, changing places – and to be successful, they must also be safe. Our unified security platform gives your team the information they need to efficiently respond to any situation.

Manage video surveillance, vehicle tracking, computer-assisted dispatch (CAD), 911 calls, gunshot detection, and other systems in one common operating picture. Work from an intuitive map interface to derive insights based on historical and live events.

Our security platform aggregates and analyzes data from multiple systems. It then alerts operators to situations-in-progress and guides them through the right steps to reach resolutions – fast.

Facilitate public-private collaboration by enabling people and businesses to selectively share camera feeds and recorded video. Investigators can then collect the digital evidence and share files with the district attorney’s office and other agencies to close more cases.

Centralize your public safety operations

Reduce response time with a unified view

Enhance coordination between agencies

Facilitate public-private collaboration

Increase effectiveness of investigations

Airports

Keeping passengers safe from curb to gate

Building a successful airport means delivering new experiences in a safe and secure environment that runs like clockwork.

Our unified security platform helps your teamwork more effectively. Manage video surveillance, access control, analytics, and airport-specific systems like radar or laser-based perimeter protection and body and baggage scanners – all from one intuitive, map-centric solution.

When security issues arise – such as luggage left behind – the platform will immediately alert your operators and guide them through a set of instructions to ensure SOP compliance.

The openness of the platform gives you the ability to grow your security system over time. This means you can add cameras to expand coverage of your perimeter, gates, and terminals. You can also use your security data to learn how people move through your airport and make changes that reduce wait times and increase profit.

[Manage security from curb to perimeter](#)

[Control access to restricted security areas](#)

[Meet compliance and cybersecurity mandates](#)

[Evolve operations with an open platform](#)

[Share video and data with outside agencies](#)

Parking enforcement

Boost parking compliance, service, and security

Parking shouldn't be a headache for drivers, nor for the officers who enforce it. With our automatic license plate recognition (ALPR) system, your team can complete patrols faster and catch more violators.

Using ALPR technology, the license plate number acts as a virtual permit. This allows drivers to park and go, without having to deal with stickers, hangtags, or cards.

Make payment more convenient for drivers by offering easy-to-use mobile apps and digital pay stations. Track your lot occupancy in real-time and guide drivers to lots with available spaces to improve traffic flow.

When you install ALPR cameras on vehicles and at lot entrances, the system automatically scans license plates and alerts operators to permit, overtime, or scofflaw violations.

With more efficient patrols, you can enhance compliance and service, and quickly recoup your ALPR investment.

[Increase enforcement efficiency](#)

[Identify scofflaws during routine patrols](#)

[Track violations and occupancy in real-time](#)

[Enforce all parking regulations simultaneously](#)

[Automate gated access and prevent fraud](#)

Healthcare

Boost safety and compliance to deliver better care

Balancing accessibility, security, and compliance fosters an efficient healthcare environment primed for exceptional care. Our unified security platform empowers your team to become more effective.

Monitor video and manage events from doors, nurses' call stations, parking solutions, and other systems from a single interface.

Manage employee access to rooms and buildings according to their qualifications and roles. Further boost compliance by restricting access rights to specific groups or individuals to counter drug theft at dispensaries, keep pollutants out of cleanrooms, and protect patient records.

In case of emergency, respond to alarms using interactive maps and follow guided procedures to get things back to normal, fast.

Even with fewer resources available, your team will become more effective at protecting everyone, while keeping operations compliant and on track.

[Manage all systems from one location](#)

[Grow your system over time](#)

[Boost parking revenues and compliance](#)

[Protect identities with video anonymization](#)

[Enhance cybersecurity resilience](#)

Utilities and energy

Strengthen the resilience of your critical infrastructure

Defending critical infrastructure requires a multi-layered approach. Our unified security platform gives your team the tools to stay vigilant and compliant.

Manage video, access control, intrusion, fire detection, SCADA, and other business systems in one intuitive solution. Efficiently monitor all remote sites from a central location and improve your cybersecurity with the latest built-in defenses.

No matter how industry regulations evolve, our flexible platform helps you adapt.

Using a map-centric view, define restricted areas to identify suspicious perimeter activity. Add analytics and automatic license plate recognition systems to track incoming and outgoing vehicles and validate drivers' identities.

The system alerts your team to incidents and guides them through standard operating procedures, ensuring your sites remain fully compliant and secure.

[Manage security and compliance in one platform](#)

[Monitor all your sites from a central location](#)

[Adapt to ever-evolving regulations](#)

[Boost perimeter security and access rights](#)

[Enhance emergency response with automation](#)

Enterprise/ Commercial

Boost security and operations
across your corporate sites

To keep people, assets, and data safe, you need to know what's happening across your enterprise. Our unified security platform gives your team the visibility and tools to enhance security from headquarters to remote offices.

Manage video, intrusion, employee and visitor access, and intercom calls from any location. Add ALPR cameras to your entrances to track vehicles and automate access to gated parking lots.

As your security evolves, you can choose the devices and systems you need. You can also use built-in cybersecurity defences and other modules that help you keep buildings secure and compliant.

Boost company productivity by streamlining the authorization of access control rights based on employee roles and company policies. Use this to grant employees access to multiple sites using a single card or mobile credentials, so your organization flows better.

Monitor all your systems within
one platform

Centralize operations for
added efficiency

Extend security to elevators
and perimeters

Allow tenants to manage their
own systems

Enhance traceability with easy reporting

Industrial/ Manufacturing

Keep your people and operations safe

A safe, well-run, and compliant environment sets the foundation for a thriving manufacturing business. Our unified security platform makes it easier for your operators to handle any challenge.

From a single interface, manage alarms, video, access control, analytics, fire protection, building automation, and other systems. Assign access rights to employees and contractors based on their qualifications and ensure workers are wearing the right safety gear to avoid injuries.

If equipment malfunctions or air quality becomes hazardous, the system will alert your operators and guide them through the steps to resolve the situation and keep employees safe.

Counter theft by using cameras and sensors to detect activity in restricted areas and at perimeters and track incoming and outgoing vehicles. Standardizing security operations across your sites helps your team maintain compliance and keep unauthorized people out.

[Get one unified security view for all sites](#)

[Automate tasks to boost operator efficiency](#)

[Detect hazards using analytics](#)

[Protect data with built-in cyber defenses](#)

[Adapt your security as operations evolve](#)

Traffic

Keep people moving with unified traffic monitoring

Helping commuters reach their destinations without setbacks enhances city life. To do that, you need to keep pace with evolving traffic conditions and trends.

Our unified platform gives your team the tools to quickly spot traffic slow downs and get roads back to normal, fast.

Consolidate data from traffic sensors, dynamic message signs, cameras, analytics, and incident management into one intuitive map interface. Identify accidents and traffic congestion in real-time and coordinate detours and response without switching systems.

The system guides operators through standard operating procedures to handle every situation in a consistent, efficient way that keeps people moving.

As your traffic needs change, our open platform evolves with you. Access historical data and add new technologies to keep improving your city's mobility and procedures over time.

[Manage all traffic data in one platform](#)

[Communicate detours from the map](#)

[Optimize automated response to any event](#)

[Gain insights from historical data](#)

[Adapt and improve operations over time](#)

Transit

Create a safe and positive passenger experience

Providing a smooth and safe mass transit environment boosts ridership and revenue. Using our unified security platform, your team can quickly spot issues to secure your entire operations.

See what's happening across platforms, stations, and depots, and onboard vehicles. Work from a central control room to manage video, analytics, access control, intercom, passenger notification, and other systems. Use advanced mapping, vehicle geolocation, and sensor data to respond to incidents and automate tasks.

If maintenance issues or emergencies arise, your operators can go from response to resolution in minutes using easy-to-follow procedures that ensure compliance. They can also retrieve and share evidence with law enforcement to coordinate an effective response.

You can also use your security data to shorten passenger wait times, streamline parking, and help secure big city events.

[Get unified command and control](#)

[Extend surveillance onboard vehicles](#)

[Enhance operations with analytics](#)

[Strengthen cybersecurity and privacy](#)

[Add devices to grow your platform](#)

Venues and open spaces

Secure your venue inside and out

Offering guests a safe and memorable experience is the cornerstone of a successful event.

Our unified security platform allows your team to secure your venue inside and out. Work from one intuitive solution to manage video cameras, door locks, intercom calls, parking, and other systems.

Quickly identify crowd bottlenecks, retail theft, or more serious threats – all from an intuitive map interface. During emergencies, operators are guided through standard operating procedures (SOPs) and prompted to share information with police to coordinate an effective response.

Speed up investigations using the same platform. Build cases, store evidence, and securely email digital files to authorized individuals in other agencies.

No matter what comes up or how your operations evolve, this flexible platform gives your team the tools to handle it all.

[Choose from a wide range of cameras](#)

[Enhance door security](#)

[Manage your parking efficiently](#)

[Collaborate with local authorities](#)

[Track the flow of people](#)
