A UNIQUE EUROPEAN PARTNER

For security and telematics

Since 1992 Multiprotexion has been one of the leading companies in Europe for the active protection of vehicles transporting high-risk goods (fashion, high tech, pharma, tobacco, luxury food) and for the protection of buildings, warehouses and large logistics areas.

Thanks to innovative technologies that enable the vehicle to protect itself, we currently protect more than 20,000 vehicles with a daily value of transported goods of more than 95 euro million.

The solution portfolio is completed by basic and advanced telematics services, starting from simple geolocalisation to the tachographs management, FMS data, fuel consumption, driving and rest hours, driver infringements, fridge temperatures and much more.

AN INTERNATIONAL ALARM RECEIVING CENTRE

Always by your side wherever your vehicles are located

MULTILINGUAGE
CONTROL

The **ARC**, flagship of Multiprotexion, is staffed by a team of more than 30 security guards. Equipped with a “Public Security Authorization & Licence”, is specialised in vehicles security system management, buildings and large logistics areas.

Thanks to a partnership with a leading international company, as well as direct and qualified access to the Authorities and Law Enforcement Agencies (LEAs) of each country, Multiprotexion guarantees a complete, widespread and extended coverage of whole Europe (EU27 + UK + CH), thus being able to intervene promptly wherever your fleet is located.

All this, together with the multilingual service that allows the operators of the ARC to communicate with drivers and customers from all over Europe, makes Multiprotexion the ideal partner for people travelling abroad.

FREIGHT TRANSPORT SECURITY UP TO THE HIGHEST LEVEL

From vans to trucks - from simple security to the highest TAPA/Vanini standards

SECURITY

24/7 ARC (Alarm Receiving Centre)

With Security Guards specialised in handling alarms sent by security systems installed on light vehicles, heavy vehicles, construction vehicles and cars.

Multilingual Services

Languages spoken: Italian, Dutch, Arabic, Czech, Chinese, Croatian, French, Greek, English, Polish, Portuguese, Romanian, Russian, Serbian, Spanish, German, Ukrainian.

Telematic Escort®

Your journey is always under the control of the 24/7 Operations Centre, which, like the control tower for an aeroplane flight, checks, monitors and certifies the smooth running of your journey from departure to final destination.

International Network

Partnership with leading international company (European 27 + UK + CH coverage) and accredited SOI (Interpol - Europol Police International Operations Centre).

Anti-jammer

Device capable of intercepting Jammer attacks and allowing the Operations Centre to intervene promptly.

Active Engine Lock

In the event of attack, if at zero speed (certified by odometer check), it allows the vehicle to shut down automatically in total safety, thus preventing it from being hijacked.

Safety locks

Pistons and electromechanical systems to protect access to the load and electronic seals to guarantee the integrity of the transported goods.

SOS Matix

Portable GPS device with integrated panic button capable of sending a localised alarm signal directly to the Operations Centre.

Additional security

Cab window protection, **Microlumix** (light variation sensor inside the trailer), **Smoke Matix** (smoke device that saturates the interior environment, making it impossible to see and therefore to steal) and much more.

Solar Matix

The green solution which, through solar panels, intelligent electronics and lithium battery storage, ensures that the security systems remains active for a long time even when the trailer is disconnected.

Download apps

FLEET MANAGEMENT AND ADVANCED TELEMATICS

For significant cost savings

TELEMATICS

Remote data download

Automatic and remote tachograph data download (.DDD): more convenient and faster.

Dispo-time

Driving hours, rest hours and exceptions used by drivers are available live.

Infringement management

Keep track of violations committed by drivers and issue infringement letters automatically.

Consumption analysis and FMS data

It analyses CAN-BUS data and vehicle consumption: obtain real cost savings.

Route planning

Plan and send optimised routes directly to the driver's smartphone.

Fridge temperatures

Real-time monitoring and certification: protect the goods integrity.

Reporting

Several reports that can be customised to suit your needs.

Interfacing

With management and third-party software via API's.

Web Fleet Portal

Multi-company, multi-user and multi-language; also from smartphone wherever you want, when you want.

Driver App

Route planning, state of progress, messaging, navigation and much more.

Automatic recognition

Tractor and trailer connection: live situation and history reporting.

Data retention

Keeping and storing tachograph data in accordance with current legislation.

PREDICTIVE AND PREVENTIVE VIDEO-SURVEILLANCE

For buildings and large logistic areas

ACTIVE CCTV

24/7 ARC (Alarm Receiving Centre)

With security guards (GPG) specialised in handling alarms sent from fixed security installations.

Thermal Cameras

Detection of intruders even in difficult environments (not illuminated, presence of vegetation, fog, etc.), in full respect of privacy.

Three protection layers

With focus on "layer 1" protecting the external perimeter through video analytics and "Artificial Intelligence solution".

Advanced sensors

Motion, noise, cross line detection and virtual barriers.

Tailor-made design

A precise 3D mapping of the area to be protected is carried out using drones.

VoIP

When an alarm is triggered, the ARC connects live to the monitored site and warns the intruder to move away through local speakers.

Multi Eye - Virtual Access Control

The telematic and automatic device with remote control designed to manage entrances and exits from commercial or logistics areas subject to heavy daily traffic.

ET - Mobile Video Surveillance Tower

Temporary solution equipped with thermal cameras and intelligent video analytics, independent in terms of both connectivity (GPRS modem/satellite communication) and energy (solar panels).
